Subject : Replacement of Hardware Token for VPN connectivity

Attachments :

Priority : High

Message : April 12, 2019

Dear CDS Elements,

CDC is always at the forefront in providing secure access to the clients for its applications. As a step towards enhancing secure access to CDC's applications, a new two factor authentication (2-FA) solution is being launched by CDC for enhanced security and improved features. This upgrade to the new 2-FA solution will be seamless for the client operations and will be closely supported by the CDC team.

In this regard, CDC shall be distributing new hardware tokens to our esteemed clients under similar terms and conditions of the service. All clients are requested to receive the hardware tokens through our authorized service agent and duly sign the return receipt. Clients shall be further communicated by our CNSG (Customer Network Support Group) staff for the activation of new token on a given date. After activation of VPN with new hardware token, client connectivity with old tokens will not take place.

We look forward to your usual cooperation.

Regards,

Amir Hashmi

Chief Technology Officer
